Semantic Query Layer » Enabling SQL Compatibility with Extensibility Framework

SQL framework is now enhanced to save flat files (functional property files, ODS and ADS inventory files, and XACML policy files) as configurations in the configuration store and can retrieve them during runtime using the Generic Configuration microservice APIs. This feature eliminates manual update of SQL properties file and PAPUI files, which are now automatically updated using the business APIs during API creation or update.

The topic related to this feature is given below:
